

MistMaster hood

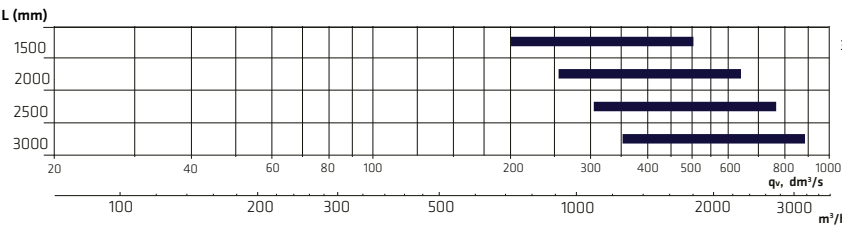

CLIMECON

Use with an open fire and charcoal appliances safely indoors

There has long been a trend in professional kitchens to cook with open flames and charcoal. This poses challenges for ventilation. The open fire appliances require large volumes of air, also the soot, heat and sparkles need to be taken care of. MistMaster hood is ideal for kitchens with charcoal grills, open fires, gas grills and other appliances that pose a potential fire hazard and risk to the ductwork. The water mist in the MistMaster hood's exhaust chamber solves the challenges perfectly and enables high air volumes with relatively small pressure losses. Ultra fine water mist of MistMaster hood suppress flames and sparks, separates soot, and considerably lowers the temperature.

Due to the modular structure of Climecon hoods, all hoods can be combined into a one functional entity - without compromising design. The MistMaster hood is available in modules 1500-3000mm.

Quick guide

User-friendly features

Unique features

- Compatible with Climecon control solution
- ModBus / ModBus compatible TCP
- Water pressure adjustment
- Magnetic 24v safe voltage valve
- Separate control unit
- IP65

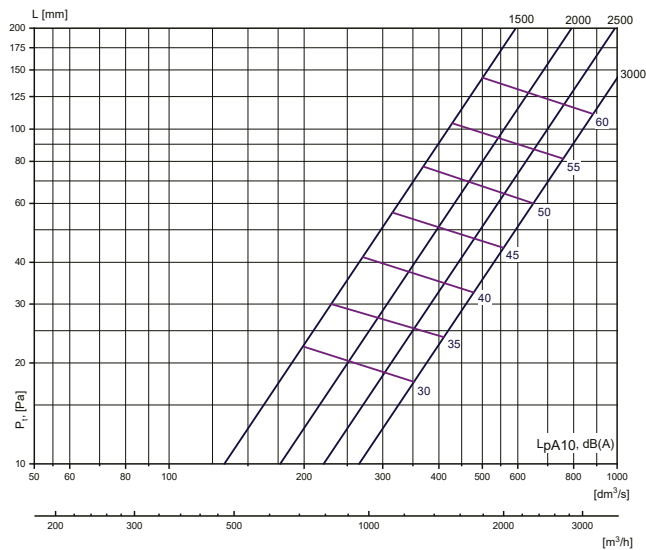

Remarkable advantages

- Automation compatible
- CFD simulated airflow
- OptiLumo luminaire
- Low sound emission
- Easy service & maintenance

The perfect configuration to suit your needs

Mix and match hoods, ventilation ceilings, and grease degradation technologies into a well-functioning entity. All our kitchen ventilation appliances are easily combined providing the ultimate solution exactly for your needs.

MistMaster hood can be seamlessly combined with other hood products in our collection, such as CleanMaster, StandardPlus and Standard hoods.

Choosing the right hood

Our products have been tested for sound pressure, pressure drop and airflow in an accredited test facility. Reliable results make it easy to choose the right product for your kitchen.

Forerunner in indoor air solutions

MistMaster and all other Climecon products are modelled accurately mathematically (CFD) to promise customers the best possible functionality. With the help of precise modelling, we ensure that the airflow in relation to the water mist is at the optimal point.
